Technical qualification and specifications for AQMS and Walkway Shelter.

The Manufacturer of Ambient Air Monitoring System should have world-wide recognition of having enough field experience in designing such system to provide high quality air pollution data. The System should be designed to minimize the time spent on maintenance and calibration. During establishing following criteria /features must be adopted and the manufacturers must comply the same in order to provide high quality data.

1. Since the system is to be operated & used for data collection in Delhi for the purpose of Air Pollution Forecasting in the Delhi region, it is highly desirable that the manufacturer of the prime analyzers (SO₂, NO_x, CO, O₃, PM, etc.) must have enough expertise on operation and maintenance of such monitoring system & on data reporting of the pollutants. Also, the preference will be given to the manufacturer who has ISO9000 /ISO9001 /ISO17025 Quality Accreditation /NATA accreditation & has executed projects with Operation & Maintenance Contracts of Ambient Air Quality Monitoring Analyzers in India. Details of such projects must be enclosed in the offer.
2. All analyzers and other sensors, Gas calibrator, zero air generator, Data Acquisition Systems and Data Collection and Reporting software should preferably be manufactured by one manufacturer to provide substantial control over the quality of the system and to allow the design of the system to be best suited for application. The analyzers used in the monitoring system must function efficiently in the temperature range of 2°C - 49°C as the system is to be operated in the Delhi region where expected annual range of temperature range of 12°C - 49°C.
3. Analyzers used in the system must be designed on US-EPA Equivalent Reference Methods. A certificate of US-EPA approval must be enclosed as pre-condition. Where US-EPA approvals are not applicable, TUV or MCerts Certificate can be provided.
4. All analyzers in the system must have technical sophistication to be connected digitally to Data Acquisition System for providing substantial advantages in communication.
5. The Data Acquisition System must have features like automatic data validation software complete with data capture percentage. All analysers should have RS 232, RS 422 and USB ports.
6. The Data Acquisition System should operate on latest version of windows with minimum of Windows 8/ Windows 10 Platform and be of a "Client/Server" configuration for improved reliability. Real time or averaged data must be viewed quickly and easily through a remote CLIENT interface on the central computer .
7. The Data Acquisition System feature calculated channels including nested calculations, vector averaging and rolling averages. The System must support remote communication with full user interface from anywhere in the world via a TCP/IP network or dial up network.
8. Data Evaluation and Reporting Software must have been upgradeable to a multi-user version.
9. The Data Evaluation and Reporting Software must be able to collect and process data from a wide variety of data acquisition systems & analyzers.
10. The engineer responsible for installation and commissioning of the station must provide on site training for operation, maintenance & data validation as per ISO9001/ ISO17025 Quality

Accreditation/ NATA accreditation procedure. This provides with hands-on experience and provides them with an understanding on how the system is integrated.

11. The manufacturer should provide the advice and services of his experts in preparing air pollution forecast if they have rendered such consultations and services in connection with Ambient Air Quality Monitoring Systems for air quality data interpretation. The experts from the company who have supplied the Air Quality Monitoring equipment's, must visit all the stations periodically to ensure that Air quality monitoring system is performing well and providing useful data.
12. The quoted rate should also be considered as rate contract for a maximum purchase of 5 such near similar (or part thereof) systems. Hence bidder should confirm the above clause of rate contract for two years after the placement of Purchase Order.

Note: Supplier should categorically provide detail feedback on each and every point mentioned above (Total 15) in chronicle order related to compliance with explanation/justification in a tabular form.
